P	AGE
Tables showing reduced quantities of Deals, &c., com-	
mencing at 4 in. \times 11 in. down to $2\frac{1}{2}$ in. \times 6 in	1
TABLES showing reduced quantities of Pine Deals in their	
various lengths, by the width in inches	163
m	
TABLES showing the amount in money at any price per	
Standard Hundred, commencing at £6 10s., and up	
to £20	261
TABLES showing the relative value of 120. 12-feet Deals	
and Battens, when compared with any given price,	
per Petersburg Standard; also the rate per foot	
cube, &c. &c	480
TABLES showing the equivalent per Standard of any given	
price per rupping foot	405

PREFACE.

WE think that the want of such a series of Tables as the following is felt, in more or less degree, by every branch of the Timber Trade. Were Timber contented without the aid of Hoppus', and Interest accounts made out without reference to Interest books, it is obvious to every one that much valuable time would be wasted, and the result less to be depended on.

Why not apply this rule to the reduction of Deals, &c.? Every Timber Merchant knows how much time is spent by his Clerks in casting Invoices, and reducing Specifications, for various purposes.

To ensure correctness it is usual for two persons to cast Invoices, &c., one to check the other. Now, were any two individuals invariably correct, our book would still be of great use, as it would enable them to arrive at the same result in much less time. But it so happens that correctness is not the invariable rule, and that one person often unknowingly adopts the error of the other, especially when, in case of difference, the two calculations are compared.

The object, then, of THE CALCULATOR is to save time, and give a correct reduction of any number of feet of any dimension, and the amount in money at any price per Petersburg standard.

This work has been very carefully got up, each of the

Authors having written out the entire work before the MSS. were compared, and the greatest care has been taken in revising the proofs. Its utility and correctness has been tested in every possible manner, and we may mention that the numerous inquiries that have been made for it, even before ready for press, show us that it is likely to become a necessity to the Trade.

The great labour involved in such an undertaking is probably the reason why no such work has hitherto been published, as a copious and correct series of Tables cannot be crammed into a book of pamphlet size, nor ought such a work to be presented to the public in a slovenly and unbusiness-like form.

At first we were in some doubt as to which fraction to adopt: for instance, some persons would call 721 ft. of $3' \times 11' = 1c$. $0 \quad 0\frac{2}{12}$; some, 1c. $0 \quad 0\frac{1}{6}$; some, 1c. $0 \quad 0\frac{51}{33}$, and others, $1 \quad 0 \quad 0\frac{11}{66}$; all, of course, being equally correct.

Now as it is impossible to give all, in print, we have adopted 66^{ths} , as being the most convenient fraction. In nearly all the sizes we have given, 1 running foot is equal to so many 66^{ths} exactly. If 33^{rds} are required, the way to arrive at that fraction need not be mentioned. If 12^{ths} are sought for, the following table will be useful:—

1 66	and	2 66		nil			
	to	8	say	1 12			
3 66 9 66 14 66 20 66 20 66 20 66 47 67 67 67 67 67 67 67 67 67 67 67 67 67	22	13 66	22	2 12			
14 66	77	66	22	12			
20 66	"	24 66 30 66	"	12 5 12			
66	77	66	22	12			
31	27	35	27	6 12			
66	99	41	77	7			
42 66	"	46 66	23	8 12			
47	"	52	77	9			
53	22	57 66	22	10			
58	99	63	"	$\frac{11}{12}$			
64	and	65	call		Oc.	0	1.

A little practice on the part of those who use 12ths, will render reference to this table unnecessary. We may here venture to suggest to the Trade the advantage of using 66ths; no other fraction will uniformly give so correct a result; and although a reduction may be made to any other fraction, near enough for all business purposes, still, when it is possible to show it exactly, we submit that it is better to do so.

However, by our system all can be accommodated, and each can choose that fraction which, either from prejudice or habit, he prefers.

Our Tables suppose, first of all, that the correct number of running feet is found; and this operation is so simple, and so little liable to errors, that any other plan would have been absurd.

For instance, had we given the exact reduction of any number of Deals, from 1 to 1,000, of every length of 3" \times 11", &c., from 6 ft. to 24 ft., and carried this on throughout, we wonder if a country merchant, who had bought, say 50 c. of various sizes, from 3" \times 11" to $2\frac{1}{2}$ " \times 7", would have taken the unreasonable trouble of turning to some fifty different Tables, and then adding up the results. Had we adopted such a course as this, our work would have been a hindrance instead of a help, and from its bulk and complexity would have been at once rejected by the Timber Trade.

We have shown the reduction of any number of feet up to 1,000, and then proceeded by thousands to 50 c., or as near to that quantity as an even number of thousands will reduce to.

In the money department we have commenced at £6 10s. per standard, and proceeded as far as £20, advancing in each Table 2s. 6d. per standard; the amount at any of these prices is given up to 1 c., and then we have advanced 1 c. at a time up to 50 c., the amount for any fraction of a deal being given at the end of each Table. We have rejected farthings and halfpence, and called three farthings a penny; and in the Tables showing the reductions, we have in the two or

three cases where compound fractions occur, gone on a

similar principle.

The Tables showing the equivalent per standard at any number of pence per foot will also be found very useful.

This is the only shape in which such a work can be put, in order to make it practically useful; had we gone on another system, and shown the reduction of any number of feet, one by one, from 1 ft. up to as many feet as would make 50 c., and carried out the same principle in the money department, we should have produced a work a trifle larger than the "London Post-Office Directory," and sacrificed utility to size.

It being then our deliberate conviction that THE CALCULATOR is in the best possible form, and that in any other the name we have given it would have been a misnomer, we will now proceed to give a few illustrations of its utility, although it is so simply arranged that explanation is almost unnecessary to any one who understands the Timber Trade.

EXAMPLE No. 1.

Suppose you sell 10 22

5 21

5 20

5.16 3" × 9"

5 12 at £10 17s. 6d. per standard.

2 10 = 594 running feet.

1 9

Turn to the Table for $3'' \times 9''$, and find 594 ft., and you will find the reduction to be 0 c. 2 21. Then refer to the money department and look at 0 c. 2 21, under the heading of £10 17s. 6d., and you will find the amount to be £7 6s. 10d.

EXAMPLE No. 2.

See $2\frac{1}{3} \times 7$ Table, 792 ft. = 0 c. 2 10. See £18 17s. 6d. Table, 0 c. 2 10 = £11 0s. 2d.

EXAMPLE No. 3.

See 3 × 9 Table, 5,000 = 5 c. 2 21
$$\frac{54}{600}$$
 = 0 2 21 $\frac{54}{600}$ = $\frac{6}{1}$ 13 $\frac{42}{60}$

See £9 15 0 Table, 6 c. 0 0 = £58 10 0 1 13 = 3 9 10
$$\frac{2}{6}$$
 = 0 1 1 $\frac{2}{6}$ = 0 1 1

The above examples will amply illustrate the use of the Tables, except those headed 14 ft. \times 3 in., 13 ft. \times 3 in., 12 ft. \times 3 in. &c.; these are introduced for the reduction of Pine Deals, or any Deals where each or most of the lengths are of a different width.

Suppose you buy or sell the following specification of Pine Deals:—

these cannot be reduced by the Tables we have explained above, as it is obvious that to make that part of The Calculator include the reduction of such a specification, we should have to give Tables commencing from 3" × 24". The easiest way, as every timber merchant knows, is to proceed thus with such a specification as the above:—Multiply the inches by the number of Deals, then multiply by the length, divide by 11, and then by 720.

By The Calculator proceed thus:—Find the number of inches, which in the above amount to 948, then refer to the Table headed 12 ft. \times 3 in. and you will find the reduction to be 1 c. 1 22 $\frac{24}{56}$. Had the above been 14 ft., 10 ft., 8 ft., or 6 ft. long, then the corresponding Tables of 14 ft. \times 3 in., 10 ft. \times 3 in., 8 ft. \times 3 in., or 6 ft. \times 3 in. would supply the desired information.

We will give one more Example:-

10 8 3 × 16 = 160 inches. 10 8 3 × 14 = 140 , 10 8 3 × 13 = 130 , 10 8 3 × 12 = 120 , 10 8 3 × 11 = 110 , 10 8 3 × 10 = 100 , 760

See Table 8 ft. \times 3 in. 760 inches = 0c. 3 $2\frac{8}{66}$.

The amount of money at any price per standard is of course found as per examples already given.

The remaining Tables showing the equivalent price

per standard at any rate per foot, need no explanation. If you sell $3'' \times 9''$ Deals at 3d. per running foot, and desire to know how much per standard that is, refer to the 3×9 Table, and you will see that £11 is the price, and this explanation will suffice for all the others.

It will be found that we have given no distinct Tables for $1\frac{\pi}{2} \times 9''$, $1\frac{1}{4} \times 9''$, $1\frac{1}{2} \times 7''$, $1\frac{1}{4} \times 7''$, and $1\frac{1}{4} \times 6''$; nor is there any occasion to do so, as half the reduction of $3'' \times 9''$, $2\frac{1}{2} \times 9''$, $3'' \times 7''$, $2\frac{1}{2} \times 7''$, and $2\frac{1}{2} \times 6''$, will, we need not say, give the accurate answer.

In conclusion, we have only again to repeat, that the greatest pains have been bestowed on this work, and that everything has been done on our part to ensure its success. We feel unwilling to say anything in its favour that might be construed into egotism, and are content to await the verdict of that Trade for whose use it is designed.

WM. RICHARDSON. CHARLES GANE.

Wisbech, January, 1860.

THE CALCULATOR.

TABLES:

SHOWING THE AMOUNT IN MONEY AT ANY GIVEN PRICE PER STANDARD.

The following Tables are arranged on the plan explained in the preface. Were 66ths, 12ths, or any other fraction, universally used, we might have given the exact amount; but as this is not the case, and as no one ever saw farthings or halfpence in a Timber Merchant's invoice, and it being impossible to give separate tables for each fraction, we think that we have very properly rejected them.

It being well known that such accuracy as this (however desirable in a general way) is unbusiness-like and unpractised by the trade, we have so arranged that, if our Tables are used, any trifle lost in one instance is gained in another. If a halfpenny, or at the *most* a penny, is lost, by rejecting a halfpenny both in the whole number and the fractional part, it must be borne in mind that in other instances equally likely to occur, the same amount is gained.

We are sure that no apology is necessary for avoiding absurd fractional parts of a penny, and thus making "The Calculator" a useful and business-like book.

TABLE

Showing how Deals may be reduced to the Standard of 120.12 feet by the Table headed 3 × 11.

Take half the ascertained number of running feet, and refer to the 3×11 Table for the reduction:

Thus, 1,440 running feet divided by two, gives 720, which will be found to be 1 standard of 120.12 feet.

EXAMPLE.

 $30.13 \ 3 \times 9$

30.15

30.17

30.21

120 deals, 1,980 running feet.

Take half, or 990, and on reference to the 3 x 11 C. qr. odd.

Table, 1 1 15 will be found to be the result.

TABLES

Showing the equivalent per Standard at any price per running foot. Thus, for example, trace along the line marked 2d. in the margin, and you will find it equal to—

£ s. d. 4 10 0 for 4 × 11 5 10 0 ,, 4 × 9 6 0 0 ,, 3 × 11 6 12 0 ,, 3 × 10 7 6 8 ,, 3 × 9 &c. &c.

By this method the value per Standard at any other price per foot will readily be found.
